SERIES QA
Pressure Regulator and Control Valve

The Generant Quick Change Regulator and Control Valve is infinitely adjustable from shut-off to full line pressure within 180° swing. Any intermediate pressure can be accurately maintained depending on the position of the handle. The self relieving design permits instant pressure reduction. Since supply pressure can be completely cut off the unit actually functions as a regulator and control valve. This valve incorporates Generant's patented venturi design to increase flow rate. It is constructed of forged brass and other high grade non-rusting materials, can be mounted in any position to accommodate any application and also can be panel mounted.

The Quick Change Regulator is available in two standard models, a two port model that has inlet and reduced pressure ports and a four port model that has two additional ¼" gauge ports. Both models are available in ¼", ⅜" and ½" pipe sizes.

PAT. NO. 2,890,713

CATALOG NUMBERS

PIPE SIZE	TWO PORTS	FOUR PORTS
¼"	2QA250	4QA250
⅜"	2QA375	4QA375
½"	2QA500	4QA500

FOR INITIAL PRESSURES TO 400 PSI
Following Reduced Pressure Ranges Are Available
(A) 0-50 PSI (B) 0-125 PSI (C) 0-200 PSI
Unless otherwise specified 0-125 PSI range will be supplied. For other ranges add A or C to catalog number.
